

**ABSTRACT**

A polymorph (A) of 4-(3-chloro-4-(cyclopropylaminocarbonyl)aminophenoxy)-7-methoxy-6-quinolinecarboxamide, having a diffraction peak at a diffraction angle ( $2\theta \pm 0.2^\circ$ ) of  $15.75^\circ$  in a powder X-ray diffraction; and a polymorph (B) of 4-[3-chloro-4-(cyclopropylaminocarbonyl)aminophenoxy]-7-methoxy-6-quinolinecarboxamide, having a diffraction peak at a diffraction angle ( $2\theta \pm 0.2^\circ$ ) of  $21.75^\circ$  in a powder X-ray diffraction.
